

# JBoss ENTERPRISE WEB SERVER

---

## WHAT IS IT?

JBoss<sup>®</sup> Enterprise Web Server combines market-leading open source technologies with enterprise capabilities to provide a single solution for large-scale websites and lightweight Java web applications. It includes certified, production-ready versions of Apache Web Server, Apache Tomcat, and common connectors used in between. It is delivered through an affordable subscription model by the experts in enterprise open source middleware.

## WHAT DOES IT DO?

JBoss Enterprise Web Server removes the complexity from managing open source-based web application environments. By including all of the popular open source technologies for building, deploying, and maintaining web applications and large scale websites, JBoss Enterprise Web Server makes it easy for enterprises to manage, administer, and secure web environments of any size.

## WHY SHOULD I CARE?

JBoss Enterprise Web Server allows enterprises to safely leverage the benefits of open source software across their web environments. With long-term, predictable product support lifecycles and operational features that ensure application infrastructure remains up-to-date and secure, JBoss Enterprise Web Server is the ideal solution for building and managing web applications in mission-critical environments.

## OVERVIEW

JBoss Enterprise Web Server provides an open source solution for both large scale websites and lightweight Java web applications. It is a complete solution for any web application environment through the combination of Apache web server, the world's most popular web server and Apache Tomcat, the market-leading servlet container with all of the popular modules and connectors for security and load balancing.

JBoss Enterprise Web Server leverages Red Hat's expertise in leading and contributing to popular open source projects, then backs them with a multi-year product support lifecycle. By selecting production-ready versions of these components and combining them with enterprise features for operational management and security tracking, JBoss Enterprise Web Server gives IT enterprises a stable and secure web application infrastructure with long-term reliability.

## BENEFITS

### Reduced complexity

Simplify your use of popular open source software and avoid integration and version conflicts. A single subscription includes certified and integrated software with everything you need to build and maintain simple web applications.

### Enterprise product lifecycle

Enjoy stable versions of popular open source software backed with long-term, predictable enterprise product lifecycles. Each release benefits from predictable updates that include defect fixes and non-intrusive features and maintains application compatibility for up to five years.

### Management

Each subscription includes access to the Red Hat enterprise IT operations portal for software management, including update and alert notifications. Easily manage configurations, inventory your applications, and deploy updates across your enterprise within seconds.

### Security updates

Keep your environment secure by taking advantage of the Red Hat dedicated security response team, which tracks security issues, defines criticality, outlines impacted use cases, and delivers critical security updates as they are identified.

### Expert technical support

Take advantage of Red Hat's enterprise expertise with Apache software. With over ten years of experience in leading, shipping, maintaining, and supporting Apache software, Red Hat's expert technical staff is the most experienced enterprise open source support team on the market.

## FEATURES AND COMPONENTS

JBoss Enterprise Web Server is a single solution for web applications, complete with all of the software and common connectors you need for a typical lightweight Java application deployment. It includes stable versions of 100% open source, production-ready technologies that have been certified and tested by Red Hat and are backed by a long-term enterprise product lifecycle.

### Apache Tomcat

Apache Tomcat is the world's most popular open source servlet container. An implementation of the Java Servlet and JavaServer Pages specifications, Apache Tomcat is ideal for simple Java applications. The optional Tomcat Native component can leverage the Apache Portable Runtime to provide improved scalability, performance, and better integration with native server technologies.

### Apache Web Server

Apache Web Server (httpd) is the most popular open source web server on the market, powering over 50% of the servers on the Internet and used on some of the world's most demanding websites. It includes common modules and connectors for authentication, caching, proxying, filtering, and load balancing (mod\_jk).

## DEPLOYMENT OPTIONS

JBoss Enterprise Web Server is a flexible solution for a wide variety of application infrastructure uses. Useful with a single subscription, components can be deployed separately or together to support a variety of web application types:

### Standard enterprise web server

Use the Apache Web Server component and included modules to front a variety of web applications, from simple websites to complex enterprise applications and everything in between.

### Simple Java application server

Take advantage of the popular Apache Tomcat to quickly build, deploy, and manage simple Java applications and services. Add subscriptions for popular open source frameworks like JBoss Hibernate, Seam, and JBoss Web Framework Kit to easily expand your application's capabilities.

### Enterprise open source application infrastructure

Combine the capabilities of JBoss Enterprise Web Server components or add Java EE capabilities with additional JBoss solutions for complete coverage for any Java application workload in your enterprise.

## PLATFORMS AND STANDARDS SUPPORT

JBoss Enterprise Web Server 1.0.x

### Component versions

- Apache Tomcat 5.5
- Apache Tomcat 6.0
- Apache Tomcat Native 1.1
- Apache Web Server 2.2
- mod\_jk 1.2.27

### Minimum system requirements

512 MB RAM  
100 MB hard disk space  
400 MHz CPU

### Supported operating systems

- Red Hat Enterprise Linux<sup>®</sup> 5 (x86, x86\_64)
- Red Hat Enterprise Linux 4 (x86, x86\_64)
- Sun<sup>®</sup> Solaris<sup>®</sup> 9 (x86)
- Sun Solaris 10 (x86, x86\_64)

### Supported JDKs for Apache Tomcat:

- OpenJDK 1.6.x
- Sun JDK 1.6.x, 1.5.x
- IBM JDK 1.6.x, 1.5.x

### Supported standards

- Java Servlet 2.5 and JavaServer Pages 2.1
- Java Servlet 2.4 and JavaServer Pages 2.0

## SUBSCRIPTION BENEFITS

Subscriptions to JBoss Enterprise Middleware aren't just an outstanding value, they're also easy to purchase and consume. Sold in flexible CPU units, all JBoss Enterprise Middleware production subscriptions include:

- Product access: Source and binary code documentation
- Updates: Regular updates that provide general enhancements, new features, etc.
- Revisions: Access to the latest bug fixes and security errata
- Upgrades: Rights to new versions of JBoss Enterprise Middleware released during the subscription lifetime
- Flexibility: Subscriptions are not version-specific, so access to and support for the previous version is included
- Management portals: Access the JBoss customer support portal and Red Hat Network to connect directly with expert technical support staff, open and track support cases in real-time, customize patch or upgrade alerts, and download certified patches and updates
- Support: Multiple support services provide unlimited incidents and coverage up to 24x7 with one-hour response time
- Long-term stability: Multi-year support and update policies for all JBoss Enterprise Middleware
- Legal assurance: The Red Hat Open Source Assurance program safeguards customers who are developing and deploying open source solutions from legal harm

Subscriptions of 32 CPUs or greater include additional value-added features, including JBoss Operations Network and developer support. For subscriptions totaling fewer than 32 CPUs, both JBoss Operations Network and developer support subscriptions may be purchased separately.

## TRAINING AND ASSISTANCE

Red Hat and its certified partners offer a range of services for JBoss Enterprise Middleware solutions, including:

- Developer support: Expert advice spanning architecture, design, configuration, optimization, and tuning recommendations.
- Technical account manager: In addition to delivering Standard and Premium support options, Red Hat offers support services with enhanced options targeted at customers who desire the deepest technical relationship with Red Hat.
- Training and certification: A full curriculum of courses focusing on JBoss Enterprise Middleware solutions for both developers and operations roles.
- Consulting: A wide range of consulting services, from small deployments to complete design, deployment, integration, migration, and management services.

For more information on the full range of JBoss Enterprise Middleware subscriptions, training, and services, please visit [jboss.com](http://jboss.com) or contact your Red Hat account manager.
