

BRMS DEVELOPMENT WORKSHOP

LEVERAGE THE POWER OF BUSINESS RULES

WHAT IS IT?

The JBoss® Enterprise BRMS Platform provides an open source business rules management system that enables easy business policy and rules development, access, and change management.

To support the development of business applications using rules technology, Red Hat offers its BRMS Development Workshop. This engagement walks through how to design, develop, and manage rules using JBoss BRMS.

By combining world-class Red Hat® training and consulting, the workshop delivers maximum knowledge transfer tailored to your business environment.

The duration of the engagement is based on your needs, typically lasting one week. A consultant with deep product expertise will help you deploy an open source business rules management system quickly and successfully, speeding time-to-production and time-to-value.

WHAT DOES IT DO?

During a BRMS Development Workshop, a consultant will provide you and your team with the knowledge you need to successfully introduce a rules application development process based on JBoss into your organization.

This workshop presents the rules development process intertwined with JBoss BRMS product capabilities. The workshop also includes case study lab exercises that are performed throughout. Alternately, the consultant can lead workshop participants through a tailored exercise using your organization's business rules.

This workshop, in combination with JBoss BRMS, will help you implement business rules in a more structured manner, with fewer headaches, and more rapidly realize your return on investment in rules technology.

WHY SHOULD I CARE?

Combining software, training, and mentoring from one source reduces development complexity and risk, while helping you realize the value of your investment faster. JBoss BRMS paired with a Red Hat JBoss BRMS Workshop lets you reduce application update development time, speed SOA deployments, and streamline business processes with the latest business rules and policies. As a result, your organization can respond with agility to environment changes and rapidly update your IT applications to feature new products and services.

By coupling JBoss BRMS with a Red Hat Consulting BRMS Development Workshop, you can implement your business rules in an efficient manner and fully realize the bottom-line benefits of a JBoss-based BRMS strategy.

WHAT DO I GET?

- Introduction to a business rules development process
- Detailed information about JBoss BRMS features, capabilities, and configuration details
- Hands-on practice with JBoss Developer Studio and JBoss BRM for authoring rules and test scenarios
- Real-time Q&A as you go through a consistent set of lab assignments that take you from business rule analysis through rule deployment and testing
- Hard copies of presentation material from the workshop for future reference

SCOPE

A consultant will:

- present a structured, documented process for developing rule-based applications.
- provide details on JBoss BRMS product features (rule language capabilities and BRM configuration options) that support the development process.
- mentor the attendees through a series of labs.

OUTLINE PLAN

- Introduction to JBoss BRMS
- Drools Rule Language
- Business Rules Development Process
- Business Rule Management
- Domain Specific Languages
- Rule Flow
- Complex Event Processing

REQUIREMENTS

To ensure the best experience, the following individuals from your organization should be available to work with the consultant during the engagement:

- Sponsor. Provides guidance, acts as an escalation point should one be necessary, and is your ultimate sign-off authority for fixed-price consulting engagements.
- Project manager. Manages the day-to-day activities related to this engagement, and ensures the timely delivery of information required for the project.
- IT and other staff. Provides Red Hat the relevant and necessary information about your IT infrastructure.

As an interactive workshop, a classroom, projector, white board, and student computers (2GB RAM minimum) are required.
